

Wally, the Walrus who codes and decodes

Gatineau, September 20, 2021 — It is with great pleasure that the Réseau BIBLIO de l'Outaouais is launching the Wally kit, the Walrus that codes and decodes, in all libraries members of his network.

Created in collaboration with GénieLab, this learning kit teaches the basics of programming to children aged 8 to 14 while creating an origami in form of a walrus.

Wally is not only a learning kit, but also a compelling story! Participants follow Wally on his journey, helping him solve challenges by coding a micro:bit to communicate with his friends in Morse code while learning about the environment and telecommunications history.

Help Wally solve puzzles and learn all about walruses, Morse code, the telegraph, programming a micro:bit and more! Will you be able to decode all of Wally's secrets?

Borrow the Wally kit at your library! It's free!
